- Create USB boot media or write to DVD

The screenshot shows the 'Download CentOS' page on the CentOS website. The header includes the CentOS logo and navigation links: GET CENTOS, ABOUT, COMMUNITY, DOCUMENTATION, and HELP. The main heading is 'Download CentOS'. Below it, a paragraph explains that users can consume CentOS Linux or CentOS Stream, noting that CentOS Linux is a rebuild of Red Hat Enterprise Linux (RHEL) and CentOS Stream is a midstream distribution. A link to 'CentOS Stream release notes' is provided. Another paragraph invites users to be a part of the community as a contributor, listing various ways to contribute like documentation, QA, testing, coding changes for SIGs, mirroring, or hosting. Two prominent orange buttons are visible: 'CentOS Linux DVD ISO' and 'CentOS Stream DVD ISO'. Below these, text states that ISOs are also available via Torrent. Further down, there are links for 'How to verify your iso' and a warning to 'read this first' if creating USB boot media. It also mentions 'alternative downloads' and that release notes are continuously updated.

Download CentOS

You now have two ways to consume the CentOS platform, CentOS Linux and CentOS Stream. CentOS Linux is a rebuild of the freely available sources for Red Hat Enterprise Linux (RHEL). CentOS Stream is a midstream distribution that provides a cleared-path for participation in creating the next version of RHEL. Read more in the [CentOS Stream release notes](#).

As you download and use CentOS Linux, the CentOS Project invites you to [be a part of the community as a contributor](#). There are many ways to contribute to the project, from documentation, QA, and testing to coding changes for SIGs, providing mirroring or hosting, and helping other users.
